

## Re-prioritising IM hydroxycobalamin injections for vitamin B12 replacement during COVID-19 pandemic

Use this tool to re-assess the risk: benefit of continued face-to-face vB12 injections for patients. Refer to the vitamin B12 full guidance here: [LINK](#)

1. Drug that may be associated with causing B12 deficiency: metformin, protein pump inhibitors, H2 receptor antagonists, oral contraceptive pill, hormone replacement therapy, anticonvulsants (see full GL for more details)
